

# Table of Contents — *High Voltage Engineering*

1. **Introduction**
  - Electrical power systems
  - Voltage stresses
  - Test voltages
2. **Generation of High Voltages**
  - DC high voltage
  - AC high voltage
  - Impulse voltages
  - High-voltage testing systems
3. **Measurement of High Voltages**
  - Spark gaps
  - Electrostatic voltmeters
  - Resistive and capacitive voltage dividers
  - Peak-voltage measurement
  - Measurement of impulse voltages
4. **Electrostatic Fields and Electrical Stress Control**
  - Electric-field distribution
  - Uniform and non-uniform fields
  - Dielectric materials
  - Electric-stress control
  - Numerical calculation of electric fields
5. **Electrical Breakdown in Gases**
  - Ionization processes
  - Electron avalanches
  - Streamer mechanism
  - Paschen's law
  - Corona discharge
  - Partial discharges
  - Breakdown mechanisms
6. **Breakdown of Solid and Liquid Dielectrics**
  - Breakdown mechanisms in solid insulation
  - Breakdown in liquids
  - Breakdown in cavities and voids
  - Electrical aging
7. **Non-Destructive Testing of Insulation**
  - Capacitance measurement
  - Dielectric losses
  - **Partial discharge measurements**
  - Insulation condition assessment
8. **Overvoltages, Testing and Insulation Coordination**
  - Lightning overvoltages
  - Switching overvoltages
  - High-voltage testing
  - Statistical treatment of test results
  - **Insulation coordination**
  - Surge protection
9. **Design and Testing of External Insulation**
  - Pollution of insulators

- Flashover
- Pollution effects
- Insulator design
- Testing requirements
