

Fourth International Conference on Advances in Steel Structures (ICASS' 05)

Sommaire / Table of Contents

Front Matter

- Preface
- International Advisory Committee
- Local Advisory Committee
- Local Organizing Committee

Volume I

Keynote Papers

- Structural steel design codes
- Direct strength design of steel compression members
- Roof structure design of Shanghai South Railway Station
- Developments in tubular joint research
- Curved members in construction

Analysis and Design

- Steel frames and columns
- Reliability assessment of steel frames
- Topology optimization
- Staggered truss systems
- Portal frame stability

Space Structures and Shells

- Buckling strength of reticulated shells
- Long-span roof analysis
- Stadium and gymnasium structures

Connections and Fabrication

- Welded joints
- Tubular connections
- Beam-column connections
- Experimental and numerical studies

Volume II

Fire Resistance

- Structural fire safety
- Membrane action in slabs
- Fire resistance of steel structures
- Steel-composite beams in fire

Fatigue and Fracture

- Fatigue reliability
- Crack propagation
- Welded steel structures
- Numerical modelling of tubular joints

Earthquake Resistance

- Seismic performance of steel structures
- Cyclic response analysis
- Steel bracing systems
- Seismic upgrading of bridges

Design

- Safety concepts in steel structures
- Optimal design methods
- Long-span trusses
- Tall building structural systems

Computational and Structural Analysis

- Finite element modelling
- Nonlinear analysis
- Plate girders and trusses
- Steel shear walls

Constructional Steel

- Residual stresses
- Durability of steel framing systems
- High-strength steels
- Steel-concrete interaction

Bridges

- Steel bridge analysis
- Fatigue life prediction
- Hollow section behaviour

Late Keynote Papers

- Stability and plasticity in structural analysis
- Utilization of high-performance steels

Indexes

- Index of Contributors
- Keyword Index
