

Contents

	Preface	xi
1	Introduction	1
1.1	Cells, Microcells, and Picocells	1
1.2	Book Structure	4
	References	6
2	Review of GTD/UTD and Physical Optics Techniques	7
2.1	GTD/UTD Approach	8
2.2	Direct Field	11
2.3	Reflected Field	12
2.4	Edge-Diffracted Field	17
2.5	Transmitted Field	22
2.6	Multiple Effects	25
2.7	Validation of GTD/UTD Models	26
2.8	Application of GTD/UTD on Semi-Deterministic Models	38
2.9	Physical Optics	45
2.10	Application of Physical Optics in Semi-Deterministic Propagation Models: Multiple Knife-Edge Diffraction	45

2.11	Application of Physical Optics in Deterministic Propagation Models: Scattering Field	
	References	46
		49
	Appendix 2A: Vector Transformations	52
2A.1	Vector Transformations Between Rectangular and Spherical Coordinate Systems	52
2A.1.1	Vector Transformations Between Rectangular Coordinate Systems	54
2A.1.2	Vector Transformations Between Spherical Coordinate Systems	55
	Appendix 2B: Fresnel Transition Function	56
3	Ray-Tracing Techniques	57
3.1	Geometrical and Morphological Models	57
3.1.1	Geometric Description	57
3.1.2	Morphological Models	58
3.1.3	Faceted Models	59
3.2	Rationale for Ray-Tracing: The Shadowing Problem	63
3.3	Ray Propagation Models	67
3.3.1	The Shooting and Bouncing Rays Method	68
3.3.2	Image Method	72
3.4	Ray-Tracing Acceleration Techniques	77
3.4.1	The Binary Space Partitioning Algorithm	78
3.4.2	The Space Volumetric Partitioning Algorithm	85
3.4.3	The Angular Z-Buffer Algorithm	86
3.5	Rigorous Determination of Diffraction Points	95

3.6	Rigorous Ray-Facet Intersection Algorithms	97
3.6.1	Ray Intersection Algorithms With Arbitrary 3D Facets	97
3.6.2	Ray Intersection Algorithms With Particular 3D Facets	102
	References	103
	Appendix 3A: Normal Vector of an Arbitrary Facet	105
	Appendix 3B: Backface Culling	105
	Appendix 3C: Calculation of the Diffraction Point in an Arbitrarily Orientated Straight Edge	106
4	Empirical and Semiempirical Pathloss Models	109
4.1	Path Loss	110
4.2	Classification of the Propagation Models	111
4.3	Macrocell Propagation Models	113
4.3.1	Allsebrook Model	113
4.3.2	Okumura-Hata Model	114
4.3.3	COST 231-Hata Model	115
4.3.4	Lee Model	115
4.3.5	Ibrahim and Parsons Models	116
4.3.6	McGeehan and Griffiths Model	117
4.3.7	Atefi and Parsons Model	117
4.3.8	Sakagami-Kuboi Model	117
4.3.9	Ikegami Model	118
4.3.10	Walfisch and Bertoni Model	119
4.3.11	Xia and Bertoni Model	120
4.3.12	COST 231-Walfisch-Ikegami Model	121
4.3.13	Other Models Based on the Diffracting Screens Layout	123

4.4	Microcell Propagation Models	123
4.4.1	Two-Ray Model	123
4.4.2	Multiple-Ray Models	125
4.4.3	Multiple-Slit Waveguide Model	125
4.4.4	Uni-Lund Model	126
4.5	Indoor Propagation Models	127
4.5.1	Log-Distance Path Loss Model	127
4.5.2	Attenuation Factor Models	127
4.5.3	Keenan-Motley Model	128
4.5.4	Multiple-Wall Model	129
	References	129
5	Estimation of Radio Channel Parameters From Results of GTD/UTD Models	133
5.1	Introduction	133
5.2	Transfer Functions Computations Using GTD/UTD Deterministic Models	134
5.3	Impulse Response Model for Passband Systems	136
5.4	Computation of the Baseband Impulse Functions From the Transfer Functions	140
5.5	Channel Statistic Analysis	145
5.5.1	Rayleigh's Case	146
5.5.2	Rice's Case	148
	References	149
6	Microcellular Design and Channel Allocation	151
6.1	Introduction	151
6.2	Microcellular Design Terminology	152
6.3	Historic Evolution of Cell Planning	154
6.4	Cell Design Objectives	156

3.5	Analysis of the Commensurability of the ℓ Modulo Systems	174
3.6	Analysis of the ℓ Compatibility Modulo for Some Multivariable Systems	180
3.7	Fixed ℓ Control Assignment in Multivariable Systems	172
3.8	Dynamic ℓ Control Assignment in Multivariable Systems	178
	References	181
	Appendix 1A: Constant Matrix Computation	185
	Appendix 1B: Interference Matrix Computation	186
3B.1	Computation of MM^T, N, N^T Without Power Control	187
3B.1.1	Diagonal Term MM^T, N, N^T	187
3B.1.2	Off-diagonal Term $MM^T, N, N^T, M \neq N$	187
3B.2	Computation of MM^T, N, N^T With Power Control	187
3B.2.1	Diagonal Term MM^T, N, N^T	187
3B.2.2	Off-diagonal Term $MM^T, N, N^T, M \neq N$ Computation With Power Control	188
	Appendix 1C: Compatibility Matrix Computation	189
	About the Authors	191
	Index	193
