

Table of Contents

1. Introduction to Heat Transfer

- Modes of heat transfer
- Conduction
- Convection
- Thermal radiation
- Energy conservation
- Thermal properties

2. Heat Conduction

- Fourier's law
- Steady-state conduction
- One-dimensional and two-dimensional conduction
- Thermal resistance
- Composite walls
- Heat generation
- Extended surfaces (fins)

3. Transient Heat Conduction

- Lumped-capacitance method
- Biot number
- Fourier number
- Transient temperature distribution
- Analytical and numerical solutions

4. Fundamentals of Convection

- Fluid flow and heat transfer
- Boundary layers
- Laminar and turbulent flow
- Internal and external flow
- Reynolds, Prandtl and Nusselt numbers

5. Forced Convection

- Flow over surfaces
- Flow through pipes and ducts
- Internal flow
- External flow
- Heat-transfer correlations

- Pressure drop

6. **Natural Convection**

- Buoyancy forces
- Natural convection from surfaces
- Natural convection in enclosures
- Grashof number
- Rayleigh number

7. **Boiling and Condensation**

- Pool boiling
- Flow boiling
- Boiling curve
- Critical heat flux
- Film boiling
- Condensation

8. **Heat Exchangers**

- Types of heat exchangers
- Overall heat-transfer coefficient
- LMTD method
- NTU-effectiveness method
- Parallel-flow and counterflow heat exchangers

9. **Thermal Radiation**

- Blackbody radiation
- Emissivity
- Absorptivity, reflectivity and transmissivity
- Stefan–Boltzmann law
- Kirchhoff's law
- View factors
- Radiation exchange

10. **Mass Transfer**

- Diffusion
- Fick's law
- Molecular and convective mass transfer
- Mass-transfer coefficients
- Sherwood and Schmidt numbers

- Heat/mass transfer analogies
