2.7	Representation of Numbers Greater Than 1 and Overflow on the TMS10C25	12
2.8	Floating-Point Representation	14
2.9	Discrete Equation Programming	15
	References	26
3	Input/Output	26
3.1	Introduction	26
3.2	Analog Interface Board	40
3.3	Analog Interface Chip	51
	References	52
4	Introduction to the Z-Transform and Difference Equations	63
4.1	Introduction	63
4.2	Mapping from s -Plane to z -Plane	65
4.3	Solution of Difference Equations Using the Z-Transform	76
4.4	Digital Oscillator from the Inverse Z-Transform	88
4.5	Digital Oscillator Using Data Transfer from PM to DM	71
	References	71
5	Finite Impulse Response Filters	75
5.1	Introduction	76
5.2	Discrete Signals	77
5.3	Linear Time-Invariant Systems	78
5.4	Convolution	78
5.5	Frequency Response	80
5.6	Finite Impulse Response Filters	81
5.7	FIR Implementation Using Fourier Series	82
5.8	Improvement of FIR Filters with Window Functions	92
5.9	Filter Development Package	96
5.10	Digital Filter Design Package	99
	References	103
6	Infinite Impulse Response Filters	105
6.1	Introduction	106
6.2	Realization Forms	106
6.3	IIR Filter Design	107
6.4	Bilinear Transformation	111
6.5	Bilinear Transformation Design Procedure	112
6.6	Scaling and Overflow	114

Preface	xiii
List of Examples and Exercises	xv
1 A Digital Signal Processing Development System	1
1.1 Introduction	1
1.2 Software Development System	2
1.3 Using the SWDS: A Simple Program	4
1.4 Analog Input/Output Alternatives	6
1.5 Testing the Analog Interface Board	8
1.6 Program Development Using SWDS Tools	10
1.7 Assembling and Downloading Using COFF	13
References	14
2 The TMS320C25 Digital Signal Processor	15
2.1 Introduction	15
2.2 TMS320C25 Architecture	16
2.3 Memory Organization	19
2.4 Addressing Modes	20
2.5 Instruction Set	21
2.6 Fixed-Point Arithmetic	26
