

Sommaire (ISBN 9780415370547)

Examples in Structural Analysis – *William M. C. McKenzie*

Préliminaires

- Preface
- Acknowledgements
- About the Author

1. Structural Analysis and Design

2. Material and Section Properties

3. Pin-Jointed Frames

- Analysis of trusses
- Joint equilibrium
- Method of joints
- Method of sections

4. Beams

- Support reactions
- Shear forces
- Bending moments
- Deflections
- Continuous beams

5. Rigid-Jointed Frames

- Frame analysis
- Sway and non-sway frames
- Internal forces
- Deflected shapes

6. Buckling Instability

- Euler buckling

- Effective length
- Critical loads
- Stability of columns

7. Direct Stiffness Method

- Matrix formulation
- Element stiffness matrices
- Structural assembly
- Computer-oriented analysis

8. Plastic Analysis

- Plastic hinges
- Collapse mechanisms
- Upper and lower bound methods
- Plastic moment capacity

Appendices

Appendix 1

- Elastic Section Properties of Geometric Figures

Appendix 2

- Beam Reactions
- Bending Moments
- Deflections

Appendix 3

- Matrix Algebra
