

Table of Contents

Part I — Introduction and Fundamentals

1. Introduction

- Heat transfer and thermal sciences
- Conduction, convection, and radiation
- Energy conservation
- Relationship between heat transfer and thermodynamics
- Problem-solving methodology

2. Introduction to Heat Conduction

- Fourier's law
- Thermal conductivity $\diamond$
- Heat diffusion equation
- Boundary and initial conditions
- Internal heat generation

Part II — Heat Conduction

3. One-Dimensional, Steady-State Conduction

- Plane walls
- Cylinders
- Spheres
- Thermal resistance networks
- Contact resistance
- Fins / extended surfaces
- Heat generation

4. Two-Dimensional, Steady-State Conduction

- 2-D heat equation
- Analytical solutions
- Numerical methods
- Finite-difference methods
- Gauss-Seidel method

5. Transient Conduction

- Transient heat transfer
- Lumped-capacitance method
- Biot number
- Fourier number

- Analytical solutions
- Heisler charts

Part III — Convection

6. Introduction to Convection

- Forced and natural convection
- Boundary layers
- Conservation equations
- Convection coefficient h
- Reynolds, Prandtl, and Nusselt numbers

7. External Flow

- Flow over a flat plate
- Laminar boundary layer
- Turbulent boundary layer
- Flow separation
- Flow over cylinders and other bodies

8. Internal Flow

- Flow inside pipes and ducts
- Laminar and turbulent flow
- Fully developed flow
- Pressure losses
- Internal convection

9. Free/Natural Convection

- Buoyancy
- Grashof number
- Rayleigh number
- Natural convection from surfaces
- Empirical correlations

Part IV — Phase Change and Heat Exchangers

10. Boiling and Condensation

- Pool boiling
- Flow boiling
- Critical heat flux

- Film condensation
- Dropwise condensation

11. **Heat Exchangers**

- Heat exchanger types
- Energy balances
- LMTD method
- Effectiveness–NTU method
- Overall heat-transfer coefficient 
- Fouling

Part V — Radiation

12. **Radiation: Processes and Properties**

- Thermal radiation
- Blackbody radiation
- Emissivity
- Absorptivity, reflectivity, transmissivity
- Stefan–Boltzmann law
- Wien's law
- Planck's law

13. **Radiative Exchange Between Surfaces**

- View factors
- Blackbody radiation exchange
- Gray surfaces
- Radiation resistance networks
- Enclosures

Part VI — Mass Transfer

14. **Mass Diffusion**

- Molecular diffusion
- Fick's law

- Steady and transient diffusion
- Mass diffusivity $\frac{m}{m \cdot s}$
- Convective mass transfer
- Heat–mass transfer analogy
