

Table of Contents — *Friction, Wear and Lubrication*

1. Introduction to Tribology

- Definition and importance of tribology
- Interaction between contacting surfaces
- Industrial applications

2. Friction

- Fundamental principles of friction
- Coulomb's laws of friction
- Origin of friction
- Coefficient of friction
- Types and regimes of friction
- Factors affecting friction

3. Wear

- Definition and mechanisms of wear
- Adhesive wear
- Abrasive wear
- Fatigue wear
- Tribochemical and oxidative wear
- Wear characterization methods

4. Lubrication

- Role and objectives of lubrication
- Liquid, solid, and gaseous lubricants
- Physicochemical properties of lubricants
- Lubrication regimes
- Hydrodynamic lubrication
- Boundary lubrication
- Elastohydrodynamic lubrication
- Stribeck curve

5. Interactions Between Friction, Wear, and Lubrication

- Effect of lubrication on friction
- Effect of lubrication on wear
- Tribofilm formation

- Surface–lubricant interactions
- Optimization of tribological performance

6. Tribological Materials and Surfaces

- Metals and alloys
- Ceramics
- Polymers
- Tribological coatings
- Surface treatments

7. Experimental Methods

- Tribological testing
- Tribometers
- Measurement of the coefficient of friction
- Wear rate and wear volume measurements
- Surface characterization after testing

8. Industrial Applications

- Engines and transmissions
- Bearings and gears
- Machining
- Aerospace applications
- Energy systems
- Biomedical applications

9. Recent Developments and Future Perspectives

- Nanolubrication
- Bio-based and environmentally friendly lubricants
- Nanoparticle-based lubricants
- Advanced tribological coatings
- Sustainable tribology
- Reduction of energy losses

10. Conclusion
