

Table of Contents

1. Introduction

- Materials Processing
- Plasmas and Sheaths
- Discharges
- Radio-Frequency Diodes
- High-Density Plasma Sources

2. Basic Plasma Equations and Equilibrium

- Field Equations, Current and Voltage
- Maxwell's Equations
- Conservation Equations
- Boltzmann's Equation
- Particle, Momentum and Energy Conservation
- Debye Length
- Quasi-Neutrality

3. Atomic Collisions

- Elastic and Inelastic Collisions
- Collision Cross Sections
- Collision Frequencies
- Electron-Atom and Ion-Atom Collisions

4. Molecular Collisions and Processes

- Molecular Excitation
- Dissociation
- Ionization
- Recombination
- Molecular Reaction Processes

5. Plasma Chemistry

- Chemical Reactions in Plasmas
- Reaction Rates
- Plasma-Surface Interactions
- Reactive Species

6. Diffusion and Transport

- Particle Diffusion
- Ambipolar Diffusion
- Diffusion Solutions
- Transport Coefficients

7. Plasma Sheaths

- Sheath Formation
- DC Sheaths
- Bohm Criterion
- Generalized Bohm Criteria
- Ion Energy at Surfaces

8. Glow Discharges

- Breakdown
- Townsend Discharge
- DC Glow Discharges
- Cathode and Anode Regions

- 9. Radio-Frequency Discharges**
 - RF Plasma Fundamentals
 - RF Sheaths
 - Capacitive Discharges
 - Dual-Frequency Discharges
- 10. High-Density Plasma Sources**
 - Inductively Coupled Plasmas
 - Electron Cyclotron Resonance
 - High-Density RF Plasmas
 - Plasma Sources and Applications
- 11. Magnetically Enhanced and Helicon Discharges**
 - Magnetic Confinement
 - Helicon Plasmas
 - High-Density Plasma Generation
- 12. Pulsed Power Discharges**
 - Pulsed Plasma Generation
 - Transient Plasma Behaviour
 - Applications of Pulsed Discharges
- 13. Langmuir Probes and Plasma Diagnostics**
 - Probe Theory
 - Electron Temperature
 - Electron Density
 - Time-Varying Fields
 - Plasma Measurements
- 14. Plasma Instabilities and Hysteresis**
 - Plasma Instabilities
 - Nonlinear Behaviour
 - Hysteresis Phenomena
- 15. Hollow Cathode Discharges**
 - Hollow Cathode Effect
 - Plasma Generation
 - Applications
- 16. Plasma Processing of Materials**
 - Plasma Etching
 - Surface Modification
 - Thin-Film Processing
 - Cleaning and Treatment
 - Ionized Physical Vapor Deposition
- 17. Dusty Plasmas**
 - Dust Charging
 - Dust–Plasma Interactions
 - Collective Behaviour
 - Applications
- 18. Kinetic Theory of Discharges**
 - Particle Distribution Functions
 - Kinetic Equations
 - Non-Equilibrium Plasmas
 - Kinetic Description of Discharges
