

Table of Contents

1. Experiments of Giant Magnetoresistance (GMR)

- Introduction to giant magnetoresistance
- GMR in magnetic multilayers
- Fe/Cr multilayer systems
- Magnetic coupling between layers
- Spin-valve structures
- GMR in nanomagnetic systems
- Experimental characteristics of GMR

2. Theory of Giant Magnetoresistance

- Fundamentals of electron transport
- Characteristic length scales
- Boltzmann transport approach
- Landauer approach
- Kubo formalism
- Transport in layered structures
- Electron scattering
- Two-current model
- Spin-dependent potentials
- Spin-dependent scattering
- Temperature effects
- Physical origin of GMR
- Relationship between GMR and TMR

3. Experiments of Tunnel Magnetoresistance (TMR)

- Magnetic tunnel junctions
- Fabrication of tunnel junctions
- Types of magnetic tunnel junctions
- Temperature dependence of TMR
- Voltage dependence of TMR
- Local transport properties
- Inelastic electron tunneling spectroscopy

4. Theory of Tunnel Magnetoresistance

- Spin-dependent tunneling
- Tunnel Hamiltonian
- Free-electron models
- Tight-binding models
- Coulomb blockade

- Magnetic granular systems
- Higher-order tunneling
- Double tunnel junctions
- Spin accumulation
- Spin injection
- Spin-dependent Coulomb blockade
- Spin injection into superconductors
- Magnetic quantum point contacts
- Andreev reflection

5. Applications of Magnetic Nanostructures

- Magnetic recording
- Magnetic recording media
- Limits of magnetic recording
- Magnetoresistive read heads
- Giant-magnetoresistance read heads
- Magnetic tunnel junction applications
- Non-volatile magnetic memory
- MRAM technology
