

Contents

1. Introduction to Synthetic Aperture Radar (SAR)

- Fundamentals of radar systems
- SAR imaging principles
- Applications of SAR technology
- Resolution and imaging geometry

2. SAR Signal Modeling

- Radar signal representation
- Target and platform geometry
- Signal propagation models
- Point-target response analysis

3. Basic SAR Signal Processing

- Pulse compression techniques
- Matched filtering
- Range processing
- Azimuth (Doppler) processing

4. SAR Image Formation Algorithms

- Range-Doppler Algorithm (RDA)
- Frequency-domain image formation
- Chirp Scaling techniques
- Backprojection methods
- Interpolation and resampling

5. Motion Compensation and Error Correction

- Platform motion effects
- Motion compensation algorithms
- Geometric corrections
- Radiometric calibration

6. SAR Image Analysis

- Resolution analysis
- Image quality assessment
- Target detection and identification
- Clutter and noise effects

7. MATLAB Implementation of SAR Algorithms

- MATLAB simulation models

- Signal generation and processing
- Image formation examples
- Performance evaluation

8. Advanced SAR Topics

- SAR interferometry (InSAR)
- Polarimetric SAR (PolSAR)
- Moving target imaging
- Remote sensing applications
