

Table of Contents

Chapter 1 – Fuel and Oil

- 1.1. Introduction to Power Station Chemistry
- 1.2. The Work of the Power Station Chemist
- 1.3. Coal: Classification and Properties
- 1.4. Coal Preparation and Handling
- 1.5. Coal Sampling and Analysis
- 1.6. Coal Combustion and Ash
- 1.7. Oil Fuels and Fuel Oils
- 1.8. Fuel Oil Storage and Handling
- 1.9. Testing of Fuel Oils and Gases
- 1.10. Air Pollution and Emissions

Chapter 2 – Corrosion: Feed and Boiler Water

- 2.1. Fundamentals of Corrosion
- 2.2. Corrosion of Metals in Power Stations
- 2.3. Feedwater Chemistry
- 2.4. Boiler Water Chemistry
- 2.5. Steam Purity and Quality
- 2.6. Sampling and Chemical Analysis
- 2.7. On-load Corrosion of Boilers
- 2.8. Corrosion Control and Monitoring

Chapter 3 – Water Treatment Plant and Cooling Water Systems

- 3.1. Sources and Quality of Raw Water
- 3.2. Water Softening
- 3.3. Demineralization and Deionization
- 3.4. Evaporation and Distillation
- 3.5. Boiler Feedwater Treatment
- 3.6. Cooling Water Treatment
- 3.7. Cooling Water Systems
- 3.8. Water Treatment Plant Operation and Control

Chapter 4 – Plant Cleaning and Inspection

- 4.1. Cleaning of Boiler and Power Station Plant
- 4.2. Chemical Cleaning
- 4.3. Mechanical Cleaning
- 4.4. Inspection of Boilers and Pressure Parts
- 4.5. Inspection Techniques
- 4.6. Detection of Deposits and Corrosion
- 4.7. Maintenance and Plant Condition Assessment

Chapter 5 – Metallurgy

- 5.1. Introduction to Power Station Metallurgy
- 5.2. Properties of Engineering Materials
- 5.3. Ferrous Metals and Steels
- 5.4. High-Temperature Materials
- 5.5. Non-Ferrous Metals and Alloys
- 5.6. Materials for Boilers and Turbines
- 5.7. Welding and Welding Materials
- 5.8. Metallurgical Examination and Testing
- 5.9. Material Failure and Defect Analysis
- 5.10. Selection of Materials for Power Station Equipment
