Modern Power Station Practice – Volume 2: Mechanical (Boilers, Fuel- and Ash-Handling Plant)

1. Boiler Unit – Furnace and Combustion Equipment

- Fundamentals of boiler design and selection
- Influence of boiler size on firing systems
- Coal characteristics and firing equipment
- Pulverized-fuel (P.F.) milling plants
- Coal mills and feeders
- Pulverized-fuel burners and furnace arrangements
- Mill and burner systems
- Stoker firing
- Oil-handling and oil-burning equipment
- Oil burners, ignition and control
- Fundamentals of combustion
- Furnace design and heat transfer
- Furnace construction and maintenance

2. Boiler Unit – Steam and Water Circuits

- Arrangement of heating surfaces
- Water-flow circuits
- Natural and assisted circulation
- Circulation design
- Circulating pumps
- Steam drums and drum internals
- Superheaters and reheaters
- Economizers
- Feedwater systems
- Boiler-water treatment and corrosion
- Steam and water circuit operation

3. Boiler Unit – Ancillary Plant and Fittings

- Boiler fittings and accessories
- Safety valves
- Water-level gauges and remote indicators
- Boiler cleaning equipment
- Sootblowing systems
- Inspection and maintenance equipment
- Boiler instrumentation
- Operational requirements and safety

4. Boiler Unit – Dust Extraction and Draught Plant

- Draught systems
- Fans and fan control
- Flue gases and gas flow
- Electrostatic precipitators
- Dust collectors and filters
- Bag filters
- Chimneys
- Flues and ducts
- Dampers and insulation
- Flue-gas washers
- Gaseous emissions and emission control

5. Fuel- and Ash-Handling Plant

- Coal reception and unloading
- Rail, waterborne and road fuel supplies
- Coal transfer systems
- Magnetic separators
- Screening and crushing
- Coal storage and reclaiming
- Coal weighing
- Belt conveyors and hoppers
- Boiler-house bunkers
- Control of coal-handling systems
- Fuel-oil storage and handling
- Oil tanks, piping, heating and pumps
- Fuel-oil filters and preheaters
- Safety and maintenance of oil-handling systems
- Ash and dust handling
- Bottom-ash hoppers
- Ash sluiceways and ash transport
- Ash sumps and storage
- Dry dust transport and dust silos
