

Table of Contents

Chapter 1 – Commissioning and Operation of Boilers and Turbo-Generators

- 1.1. Introduction to Commissioning
- 1.2. Plant Commissioning Procedures
- 1.3. Commissioning Organisation and Responsibilities
- 1.4. Safety during Commissioning
- 1.5. Initial Plant Operation
- 1.6. Boiler Operation
- 1.7. Turbo-Generator Operation
- 1.8. Start-up and Shutdown Procedures
- 1.9. Station Staffing and Operating Procedures
- 1.10. Operational Checks and Tests

Chapter 2 – Operation and Economic Loading

- 2.1. Principles of Economic Operation
- 2.2. Heat Balance and Heat Rate
- 2.3. Thermal Efficiency
- 2.4. Generator and Station Efficiency
- 2.5. Fuel Consumption and Operating Costs
- 2.6. Incremental Heat Rate
- 2.7. Incremental Operating Costs
- 2.8. Merit-Order Operation
- 2.9. Out-of-Merit Operation
- 2.10. Outage Costs
- 2.11. Constraints on Economic Operation
- 2.12. System Security and Spinning Reserve
- 2.13. Network Constraints
- 2.14. Voltage and Reactive Power Control
- 2.15. Frequency Control
- 2.16. Economic Load Dispatch
- 2.17. Estimation of Demand and Available Plant
- 2.18. Plant Outage Programming
- 2.19. Fuel Requirements and Energy Storage
- 2.20. Computer Applications in Power-System Operation

Chapter 3 – Safety and Maintenance

- 3.1. Introduction to Safety Organisation
- 3.2. Legal and Statutory Requirements
- 3.3. Safety Rules and Procedures
- 3.4. Maintenance Organisation
- 3.5. Maintenance Planning and Control
- 3.6. Corrective Maintenance
- 3.7. Planned Preventive Maintenance
- 3.8. Maintenance Records
- 3.9. Plant History and Technical Records
- 3.10. Statutory Inspection and Records
- 3.11. Lubrication and Routine Maintenance
- 3.12. Spare Parts and Tools
- 3.13. Maintenance Training
