
CONTENTS

PREFACE	xiii
INTRODUCTION	1
1. MULTIDIMENSIONAL SIGNALS AND SYSTEMS	5
1.1 Two-Dimensional Discrete Signals 6	
1.1.1 <i>Some Special Sequences, 7</i>	
1.1.2 <i>Separable Sequences, 8</i>	
1.1.3 <i>Finite-Extent Sequences, 9</i>	
1.1.4 <i>Periodic Sequences, 9</i>	
1.2 Multidimensional Systems 12	
1.2.1 <i>Fundamental Operations on Multidimensional Signals, 12</i>	
1.2.2 <i>Linear Systems, 14</i>	
1.2.3 <i>Shift-Invariant Systems, 14</i>	
1.2.4 <i>Linear Shift-Invariant Systems, 15</i>	
1.2.5 <i>Cascade and Parallel Connections of Systems, 20</i>	

- 1.2.6 *Separable Systems, 22*
- 1.2.7 *Stable Systems, 23*
- 1.2.8 *Regions of Support, 23*
- *1.2.9 *Vector Input-Output Systems, 25*
- 1.3 **Frequency-Domain Characterization of Signals and Systems 26**
 - 1.3.1 *Frequency Response of a 2-D LSI System, 26*
 - 1.3.2 *Determining the Impulse Response from the Frequency Response, 29*
 - 1.3.3 *Multidimensional Fourier Transform, 31*
 - 1.3.4 *Other Properties of the 2-D Fourier Transform, 33*
- 1.4 **Sampling Continuous 2-D Signals 36**
 - 1.4.1 *Periodic Sampling with Rectangular Geometry, 36*
 - 1.4.2 *Periodic Sampling with Arbitrary Sampling Geometries, 39*
 - 1.4.3 *Comparison of Rectangular and Hexagonal Sampling, 44*
- *1.5 **Processing Continuous Signals with Discrete Systems 47**
 - 1.5.1 *Relationship between the System Input and Output Signals, 48*
 - 1.5.2 *System Frequency Response, 49*
 - 1.5.3 *Alternative Definition of the Fourier Transform for Discrete Signals, 50*

2. DISCRETE FOURIER ANALYSIS OF MULTIDIMENSIONAL SIGNALS

60

- 2.1 **Discrete Fourier Series Representation of Rectangularly Periodic Sequences 61**
- 2.2 **Multidimensional Discrete Fourier Transform 63**
 - 2.2.1 *Definitions, 63*
 - 2.2.2 *Properties of the Discrete Fourier Transform, 67*
 - 2.2.3 *Circular Convolution, 70*
- 2.3 **Calculation of the Discrete Fourier Transform 74**
 - 2.3.1 *Direct Calculation, 75*
 - 2.3.2 *Row-Column Decompositions, 75*
 - 2.3.3 *Vector-Radix Fast Fourier Transform, 76*
 - 2.3.4 *Computational Considerations in DFT Calculations, 81*
- *2.4 **Discrete Fourier Transforms for General Periodically Sampled Signals 87**
 - 2.4.1 *DFT Relations for General Periodically Sampled Signals, 87*
 - 2.4.2 *Fast Fourier Transform Algorithms for General Periodically Sampled Signals, 90*
 - 2.4.3 *Some Special Cases, 96*

*2.5	Interrelationship between M -dimensional and One-Dimensional DFTs	100
2.5.1	<i>Slice DFT, 101</i>	
2.5.2	<i>Good's Prime Factor Algorithm for Decomposing a 1-D DFT, 103</i>	
3.	DESIGN AND IMPLEMENTATION OF TWO-DIMENSIONAL FIR FILTERS	112
3.1	FIR Filters	112
3.2	Implementation of FIR Filters	113
3.2.1	<i>Direct Convolution, 113</i>	
3.2.2	<i>Discrete Fourier Transform Implementations of FIR Filters, 114</i>	
3.2.3	<i>Block Convolution, 116</i>	
3.3	Design of FIR Filters Using Windows	118
3.3.1	<i>Description of the Method, 118</i>	
3.3.2	<i>Choosing the Window Function, 119</i>	
3.3.3	<i>Design Example, 120</i>	
3.3.4	<i>Image Processing Example, 124</i>	
*3.4	Optimal FIR Filter Design	126
3.4.1	<i>Least-Squares Designs, 128</i>	
3.4.2	<i>Design of Zero-Phase Equiripple FIR Filters, 130</i>	
3.5	Design of FIR Filters for Special Implementations	132
3.5.1	<i>Cascaded FIR Filters, 132</i>	
3.5.2	<i>Parallel FIR Filters, 134</i>	
3.5.3	<i>Design of FIR Filters Using Transformations, 137</i>	
3.5.4	<i>Implementing Filters Designed Using Transformations, 144</i>	
3.5.5	<i>Filters with Small Generating Kernels, 148</i>	
*3.6	FIR Filters for Hexagonally Sampled Signals	149
3.6.1	<i>Implementation of Hexagonal FIR Filters, 150</i>	
3.6.2	<i>Design of Hexagonal FIR Filters, 150</i>	
4.	MULTIDIMENSIONAL RECURSIVE SYSTEMS	162
4.1	Finite-Order Difference Equations	163
4.1.1	<i>Realizing LSI Systems Using Difference Equations, 163</i>	
4.1.2	<i>Recursive Computability, 164</i>	
4.1.3	<i>Boundary Conditions, 168</i>	
4.1.4	<i>Ordering the Computation of Output Samples, 171</i>	

4.2	Multidimensional z -Transforms	174
4.2.1	Transfer Function,	174
4.2.2	The z -Transform,	175
4.2.3	Properties of the 2-D z -Transform,	180
4.2.4	Transfer Functions of Systems Specified by Difference Equations,	182
4.2.5	Inverse z -Transform,	186
4.2.6	Two-Dimensional Flowgraphs,	187
4.3	Stability of Recursive Systems	189
4.3.1	Stability Theorems,	190
*4.3.2	Stability Testing,	193
4.3.3	Effect of the Numerator Polynomial on Stability,	196
4.3.4	Multidimensional Stability Theorems,	197
4.4	Two-Dimensional Complex Cepstrum	198
4.4.1	Definition of the Complex Cepstrum,	198
4.4.2	Existence of the Complex Cepstrum,	199
4.4.3	Causality, Minimum Phase, and the Complex Cepstrum,	201
4.4.4	Spectral Factorization,	202
*4.4.5	Computing the 2-D Complex Cepstrum,	205
5.	DESIGN AND IMPLEMENTATION OF TWO-DIMENSIONAL IIR FILTERS	
5.1	Classical 2-D IIR Filter Implementations	218
5.1.1	Direct Form Implementations,	219
5.1.2	Cascade and Parallel Implementations,	221
5.2	Iterative Implementations for 2-D IIR Filters	224
5.2.1	Basic Iterative Implementation,	225
5.2.2	Generalizations of the Iterative Implementation,	228
*5.2.3	Truncation, Boundary Conditions, and Signal Constraints,	230
5.3	Signal Flowgraphs and State-Variable Realizations	234
5.3.1	Circuit Elements and Their Realization,	234
5.3.2	Minimizing the Number of Shift Operators,	238
5.3.3	State-Variable Realizations,	240
5.4	Space-Domain Design Techniques	244
5.4.1	Shanks's Method,	246
5.4.2	Descent Methods for Space-Domain Design,	248
5.4.3	Iterative Prefiltering Design Method,	250

5.5	Frequency-Domain Design Techniques	253
5.5.1	<i>General Minimization Procedures</i>	253
5.5.2	<i>Magnitude and Magnitude-Squared Design Algorithms</i>	255
5.5.3	<i>Magnitude Design with a Stability Constraint</i>	255
5.5.4	<i>Zero-Phase IIR Frequency-Domain Design Methods</i>	256
5.5.5	<i>Frequency Transformations</i>	259
5.6	Design Techniques for Specialized Structures	262
5.6.1	<i>Cascade Designs</i>	262
5.6.2	<i>Separable Denominator Designs</i>	262
*5.6.3	<i>Lattice Structures</i>	266
*5.7	Stabilization Techniques	276
5.7.1	<i>Cepstral Stabilization</i>	276
5.7.2	<i>Shaw's Stabilization Technique</i>	277
6.	PROCESSING SIGNALS CARRIED BY PROPAGATING WAVES	289
6.1	Analysis of Space–Time Signals	290
6.1.1	<i>Elemental Signals</i>	290
6.1.2	<i>Filtering in Wavenumber–Frequency Space</i>	291
6.2	Beamforming	293
6.2.1	<i>Weighted Delay-and-Sum Beamformer</i>	293
6.2.2	<i>Array Pattern</i>	294
6.2.3	<i>Example of an Array Pattern</i>	297
6.2.4	<i>Effect of the Receiver Weighting Function</i>	299
6.2.5	<i>Filter-and-Sum Beamforming</i>	300
6.2.6	<i>Frequency-Domain Beamforming</i>	301
6.3	Discrete-Time Beamforming	303
6.3.1	<i>Time-Domain Beamforming for Discrete-Time Signals</i>	304
6.3.2	<i>Interpolation Beamforming</i>	307
6.3.3	<i>Frequency-Domain Beamforming for Discrete-Time Signals</i>	309
6.4	Further Considerations for Array Processing Applications	311
6.4.1	<i>Analysis of a Narrowband Beamformer</i>	312
6.5	Multidimensional Spectral Estimation	315
6.5.1	<i>Classical Spectral Estimation</i>	316
6.5.2	<i>High-Resolution Spectral Estimation</i>	321
6.5.3	<i>All-Pole Spectral Modeling</i>	325
*6.5.4	<i>Maximum Entropy Spectral Estimation</i>	331
*6.5.5	<i>Extendibility</i>	338

7. INVERSE PROBLEMS

348

- 7.1 Constrained Iterative Signal Restoration 349
 - 7.1.1 *Iterative Procedures for Constrained Deconvolution, 350*
 - 7.1.2 *Iterative Procedures for Signal Extrapolation, 354*
 - 7.1.3 *Reconstructions from Phase or Magnitude, 356*
- 7.2 Seismic Wave Migration 359
- 7.3 Reconstruction of Signals from Their Projections 363
 - 7.3.1 *Projections, 363*
 - 7.3.2 *Projection-Slice Theorem, 366*
 - 7.3.3 *Discretization of the Reconstruction Problem, 367*
 - 7.3.4 *Fourier-Domain Reconstruction Algorithms, 369*
 - 7.3.5 *Convolution/Back-Projection Algorithm, 373*
 - 7.3.6 *Iterative Reconstruction Algorithms, 376*
 - *7.3.7 *Fan-Beam Reconstructions, 376*
- 7.4 Projection of Discrete Signals 379
