

## Table of Contents :

### Part I – Fundamentals of Thermodynamics

#### 1. Basic Concepts and Definitions

- Thermodynamic systems (closed, open, isolated)
- Properties and state variables
  - Thermodynamic equilibrium
  - Units and measurement systems

#### 2. Energy and the First Law of Thermodynamics

- Work and heat
- Internal energy and enthalpy
  - Energy balance for closed systems
  - Energy equation for open systems (control volumes)

#### 3. The Second Law of Thermodynamics

- Heat engines and refrigerators
- Kelvin–Planck and Clausius statements
- Entropy and irreversibility
- Carnot cycle and efficiency limits

#### 4. Thermodynamic Properties of Substances

- Ideal gases
- Real gases and equations of state
- Phase equilibrium and phase diagrams
- Steam tables and property charts

## 5. Thermodynamic Processes and Cycles

- Isothermal, adiabatic, polytropic processes
- Gas power cycles (Otto, Diesel, Brayton)
- Vapor power cycles (Rankine)
- Refrigeration and heat pump cycles

## Part II – Heat Transfer

### 6. Fundamentals of Heat Transfer

- Modes of heat transfer
- Thermal conductivity
- General heat conduction equation

### 7. Heat Conduction

- Steady-state conduction (plane walls, cylinders, spheres)
- Transient heat conduction
- Thermal resistance concept

## 8. Convective Heat Transfer

- Boundary layer theory
- Forced convection
- Natural convection
- Dimensionless numbers (Reynolds, Nusselt, Prandtl)

## 9. Thermal Radiation

- Blackbody radiation
- Radiation laws
- Radiative heat exchange between surfaces

## 10. Heat Exchangers and Industrial Applications

- Types of heat exchangers
- Log mean temperature difference (LMTD)
- Effectiveness–NTU method
- Applications in power and refrigeration systems
