

Table of Contents

Chapter 1 – Introduction

- Introduction to Power Station Instrumentation
- Functions of Instrumentation
- Measurement and Control in Power Stations
- Instrumentation Systems and Applications
- Accuracy, Reliability and Calibration

Chapter 2 – Automatic Control

- Principles of Automatic Control
- Control Systems and Control Loops
- Feedback and Automatic Regulation
- Pneumatic and Electrical Control
- Process Control
- Boiler Control
- Turbine Control
- Automatic Control Equipment
- Controllers, Actuators and Positioners

Chapter 3 – Automation, Protection Interlocks and Manual Controls

- Power Station Automation
- Automatic Sequencing
- Protection Systems
- Safety Interlocks
- Boiler and Turbine Interlocks
- Manual Control Systems
- Alarm and Trip Systems
- Emergency Controls

Chapter 4 – Boiler and Turbine Instrumentation and Actuators

- Boiler Instrumentation
- Steam Pressure and Temperature Measurement
- Feedwater Measurement
- Drum Level Measurement
- Combustion and Furnace Measurements
- Flue Gas Measurement
- Turbine Speed Measurement
- Vibration and Temperature Monitoring
- Valve Actuators
- Turbine Control Devices

Chapter 5 – Electrical Instruments and Metering

- Electrical Measurements
- Voltage and Current Measurement
- Power and Energy Measurement
- Frequency Measurement
- Power Factor Measurement
- Wattmeters and Energy Meters
- Current and Voltage Transformers
- Electrical Recording Instruments
- Metering Systems

Chapter 6 – Central Control Rooms

- Control Room Design
- Control Panels and Displays
- Operator Information Systems
- Alarm Systems
- Control Room Instrumentation
- Data Recording and Indication
- Operator Control and Supervision
- Centralised Plant Control

Chapter 7 – On-Line Computer Systems

- Computers in Power Station Control
- Data Acquisition
- Data Logging
- On-Line Monitoring
- Automatic Data Processing
- Computer-Based Control
- Load and Performance Calculations
- Fault Detection and Alarms
- Digital Control Systems

Chapter 8 – Control and Instrumentation System Considerations

- System Design
- Instrument Reliability
- Calibration and Maintenance
- Signal Transmission
- Electrical Interference
- Instrument Safety
- Testing and Commissioning
- System Performance
- Reliability and Availability
