

Contents :

Chapter 1 — Introduction

1.1 Introduction

1.2 Condensed GPS Program History

1.3 GPS Overview

- 1.3.1 PPS
- 1.3.2 SPS
- 1.4 GPS Modernization Program
- 1.5 GALILEO Satellite System
- 1.6 Russian GLONASS System
- 1.7 Chinese BeiDou System
- 1.8 Augmentations
- 1.9 Markets and Applications
 - 1.9.1 Land
 - 1.9.2 Aviation
 - 1.9.3 Space Guidance
 - 1.9.4 Maritime
- 1.10 Organization of the Book

Chapter 2 — Fundamentals of Satellite Navigation

p. 21

2.1 Concept of Ranging Using TOA Measurements

- 2.1.1 Two-Dimensional Position Determination
- 2.1.2 Principle of Position Determination via Satellite-Generated Ranging Signals
- 2.2 Reference Coordinate Systems
 - 2.2.1 Earth-Centered Inertial Coordinate System
 - 2.2.2 Earth-Centered Earth-Fixed Coordinate System
 - 2.2.3 World Geodetic System
 - 2.2.4 Height Coordinates and the Geoid
- 2.3 Fundamentals of Satellite Orbits
 - 2.3.1 Orbital Mechanics
 - 2.3.2 Constellation Design
- 2.4 Position Determination Using PRN Codes
 - 2.4.1 Determining Satellite-to-User Range
 - 2.4.2 Calculation of User Position
- 2.5 Obtaining User Velocity
- 2.6 Time and GPS
 - 2.6.1 UTC Generation
 - 2.6.2 GPS System Time
 - 2.6.3 Receiver Computation of UTC (USNO)

Chapter 3 — GPS System Segments

This chapter treats the three principal components of GPS:

- Space segment
- Control segment
- User segment
- GPS satellites
- Ground-control infrastructure
- Monitoring stations
- GPS receivers
- System operation and interfaces

Chapter 4 — GPS Satellite Signal Characteristics

- GPS signal structure
- Carrier frequencies
- Modulation
- PRN spreading codes
- Navigation data
- C/A code
- P(Y) code
- Signal power
- Signal bandwidth
- New GPS signals
- Signal modernization

Chapter 5 — Satellite Signal Acquisition, Tracking, and Data Demodulation

- GPS receiver signal processing
- Signal acquisition
- Code acquisition
- Carrier acquisition
- Signal tracking
- Code tracking loops
- Carrier tracking loops
- Data demodulation
- Receiver synchronization
- Loop design
- Tracking performance

Chapter 6 — Interference, Multipath, and Scintillation

- Radio-frequency interference
- Intentional and unintentional interference
- Jamming
- Multipath propagation
- Signal distortion
- Ionospheric scintillation
- Effects on GPS receiver performance
- Mitigation techniques

Chapter 7 — Performance of Stand-Alone GPS

- Positioning accuracy
- GPS error sources
- Satellite geometry
- User-equivalent range error
- Dilution of precision
- Availability
- Integrity
- Continuity
- Stand-alone GPS performance

Chapter 8 — Differential GPS

- Differential positioning
- DGPS principles
- Reference stations
- Differential corrections
- Local-area DGPS
- Wide-area augmentation
- Accuracy improvement
- DGPS services
- Applications of differential GPS

Chapter 9 — Integration of GPS with Other Sensors and Network Assistance

9.1 Introduction

9.2 GPS/Inertial Integration

- GPS/INS integration
- Inertial sensors
- Kalman filtering
- Navigation-state estimation
- Loosely coupled and tightly coupled integration

9.3 Sensor Integration in Land Vehicle Systems

- Vehicle navigation
- GPS and vehicle sensors
- Dead reckoning
- Integrated vehicle positioning

9.4 Network Assistance

- Assisted GPS
- Cellular networks
- Network assistance
- Fast acquisition
- Positioning in difficult environments

The detailed table of contents specifically identifies these three major sections under Chapter 9.

Chapter 10 — GALILEO

- European satellite navigation system
- GALILEO architecture
- GALILEO signals
- GALILEO services
- Positioning and navigation
- Relationship between GALILEO and GPS

Chapter 11 — Other Satellite Navigation Systems

- GLONASS
- BeiDou
- QZSS
- Other GNSS developments
- International satellite-navigation systems
- Interoperability and combined GNSS use

Chapter 12 — GNSS Markets and Applications

- GNSS market
- Navigation applications
- Land applications
- Aviation
- Maritime applications
- Space applications
- Telecommunications
- Timing applications
- Transportation
- Consumer applications
- Future GNSS applications

The publisher describes the second edition as adding coverage of **vehicle and cellular-phone integration, new satellite signals, GALILEO and developments in the GPS marketplace.**

Appendices

Appendix A — Least Squares and Weighted Least Squares Estimates

- Least-squares estimation
- Weighted least squares
- Position estimation
- Measurement equations
- Estimation errors

Appendix B — Stability Measures for Frequency Sources

- Frequency standards
- Clock stability
- Frequency-source characterization

- Time and frequency measurement

Appendix C — Free-Space Propagation Loss

- Free-space propagation
- Radio-wave propagation
- Path loss
- Link-budget considerations
