

Contents :

Preface

Introduction

1. Basic Definitions
2. Conversion of Electric Energy by the Transformer
3. Electromechanical Energy Conversion by an Electrical Machine
4. Functional Classification of Electromagnetic Energy-Converting Devices

Part 1 — Transformers

Chapter 1 — An Outline of Transformers

Chapter 2 — Electromagnetic Processes in the Transformer at No-Load

Chapter 3 — Electromagnetic Processes in the Transformer on Load

Chapter 4 — Transformation of Three-Phase Currents and Voltages

Chapter 5 — Measurement of Transformer Quantities

Chapter 6 — Transformer Performance on Load

Chapter 7 — Tap Changing

Chapter 8 — Calculation of Transformer Parameters

Chapter 9 — Relationship Between Transformer Quantities and Dimensions

Chapter 10 — Multiwinding Transformers. Autotransformers

Chapter 11 — Transformers in Parallel

Chapter 12 — Three-Phase Transformers Under Unbalanced Load

Chapter 13 — Transients in Transformers

Chapter 14 — Overvoltage Transients in Transformers

Chapter 15 — Special-Purpose Transformers

Chapter 16 — Heating and Cooling of Transformers

Chapter 17 — Transformers of Soviet Manufacture

Part 2 — A General Theory of Electromechanical Energy Conversion by Electrical Machines

Chapter 18 — Electromechanical Processes in Electrical Machines

Chapter 19 — Production of a Periodically Varying Magnetic Field in Electrical Machines

Chapter 20 — Basic Machine Designs

Chapter 21 — Conditions for Unidirectional Energy Conversion by Electrical Machines

Chapter 22 — Windings for A.C. Machines

Chapter 23 — Calculation of the Magnetic Field in an Electrical Machine

Chapter 24 — The Mutual Magnetic Field of a Phase Winding and Its Elements

Chapter 25 — The Mutual Magnetic Field of a Polyphase Winding

Chapter 26 — The Magnetic Field of a Rotating Field Winding

Chapter 27 — Flux Linkages of and EMFs Induced by Rotating Fields

Chapter 28 — The Inductances of Polyphase Windings

Chapter 29 — The Electromagnetic Torque

Chapter 30 — Energy Conversion by a Rotating Magnetic Field

Chapter 31 — Energy Conversion Losses and Efficiency
