

Contents :

1. Introduction

- Motivation
- Neural networks
- Fuzzy logic control
- Evolutionary computation
- Hybrid systems
- Organization of the book

2. Fundamentals of Neural Networks

- Basic structure of a neuron
- Model of biological neurons
- Elements of neural networks
- Weighting factors
- Threshold
- Activation function
- ADALINE
- Linearly separable patterns
- Single-layer perceptron
- Perceptron algorithm
- Multilayer perceptron
- Input-output mapping
- XOR realization

3. Neural Network Architectures

- Neural-network classifications
- Feedforward and feedback networks
- Supervised and unsupervised learning
- Backpropagation
- Delta training rule
- Radial Basis Function Networks (RBFN)
- Kohonen self-organization networks
- Hopfield networks

4. Applications of Neural Networks in Medicine and Biological Sciences

- Medical applications
- Cancer research
- Biosignal detection and correction
- Medical treatment decision-making

5. Application of Neural Network in Design of Digital Filters

- Neural-network identification
- Training algorithms
- Filter design
- Stability and convergence
- One-dimensional and two-dimensional digital filters

6. Application of Computer Networking Using Neural Network

- Self-similar packet traffic
- Fractal properties
- Neural-network traffic modeling
- Packet-loss prevention
- Packet-latency prediction

7. Application of Neural Networks in Oil Refineries

- Construction and training of neural networks

- Process variables
- Data acquisition and analysis
- Prediction of refinery-process parameters

8. Introduction to Fuzzy Sets: Basic Definitions and Relations

- Classical sets
- Fuzzy sets
- Membership functions
- Fuzzy-set operations
- α -cuts
- Extension principle
- Fuzzy relations

9. Introduction to Fuzzy Logic

10. Fuzzy Control and Stability

11. Soft Computing Approach to Safe Navigation of Autonomous Planetary Rovers

12. Autonomous Underwater Vehicle Control Using Fuzzy Logic

13. Application of Fuzzy Logic

- Industrial/process applications
- Chilling systems
- Heating systems
- Energy management

14. Application of Adaptive Neuro-Fuzzy Inference Systems to Robotics

- ANFIS
- Inverse kinematics
- Fuzzy-logic solution
- ANFIS solution
- Microbot controller design

15. Application of Soft Computing for Desalination Technology

- Reverse osmosis
- Process parameters
- Neural-network prediction
- Fuzzy control
- Chemical dosing
- Pressure and flow-rate control
- ANFIS

16. Computational Intelligence Approach to Object Recognition

17. An Introduction to Evolutionary Computation

18. Evolutionary Concepts for Image Processing Applications

19. Evolutionary Fuzzy Systems

20. Genetic and Evolutionary Methods for Mobile Robot Motion Control and Path Planning

- Genetic programming
- Path tracking
- Evolutionary path planning
- Fuzzy selection
- Controller robustness

21. Problems and MATLAB Programs

- Neural-network problems
- Fuzzy-logic problems
- Applications
- MATLAB programs
