

Contents:

1. Introduction

- 1.1 General Overview
- 1.2 Book Goals & Outline
- 1.3 Notation

2. Identification of Dynamical Systems Using Recurrent High-order Neural Networks

- 2.1 The RHONN Model
- 2.2 Approximation Properties
- 2.3 Learning Algorithms
- 2.4 Filtered Regressor RHONN
- 2.5 Filtered Error RHONN
- 2.6 Robust Learning Algorithms
- 2.7 Simulation Results
- Summary

3. Indirect Adaptive Control

- 3.1 Identification
- 3.2 Robustness of the RHONN Identifier Owing to Unmodeled Dynamics
- 3.3 Indirect Control
- 3.4 Parametric Uncertainty
- 3.5 Parametric Plus Dynamic Uncertainties
- 3.6 Test Case: Speed Control of DC Motors
- 3.7 The Algorithm
- 3.8 Simulation Results
- Summary

4. Direct Adaptive Control

- 4.1 Adaptive Regulation — Complete Matching
- 4.2 Robustness Analysis
- 4.3 Modeling Error Effects
- 4.4 Model Order Problems
- 4.5 Simulations
- 4.6 Modeling Errors with Unknown Coefficients
- 4.7 Complete Model Matching at $|x| = 0$
- 4.8 Simulation Results
- 4.9 Tracking Problems
- 4.10 Complete Matching Case
- 4.11 Modeling Error Effects
- 4.12 Extension to General Affine Systems
- 4.13 Adaptive Regulation

- 4.14 Disturbance Effects
- 4.15 Simulation Results
- Summary

5. Manufacturing Systems Scheduling

- 5.1 Problem Formulation
- 5.2 Continuous Control Input Definition
- 5.3 The Manufacturing Cell Dynamic Model
- 5.4 Continuous-time Control Law
 - The Ideal Case
 - The Modeling Error Case
- 5.5 Real-time Scheduling
- 5.6 Determining the Actual Discrete Dispatching Decision
- 5.7 Discretization Effects
- 5.8 Simulation Results
- Summary

6. Scheduling Using RHONNs: A Test Case

- 6.1 Test Case Description
 - General Description
 - Production Planning & Layout in SHW
 - Problem Definition
 - Manufacturing Cell Topology
 - RHONN Model Derivation
 - Other Scheduling Policies
- 6.2 Results & Comparisons
- Summary
