

Contents :

1. **Preface**
2. **Chapter 1 – Introduction**
 - Evolution of lightwave systems
 - Components of a lightwave system: transmitters, channels, receivers
 - Electrical signals and digital formats
 - Channel multiplexing (TDM, FDM, CDM)
 - Problems & references

Chapter 2 – Optical Signal Generation

- Modulation formats (ASK, PSK, FSK)
- Digital data formats (NRZ, RZ, spectral density)
- Bit-stream generation and transmitter design

• **Chapter 3 – Signal Propagation in Fibers**

- Basic propagation and loss mechanisms
- Dispersion and its impacts
- Polarization-mode dispersion & polarization-dependent loss

Chapter 4 – Nonlinear Impairments

- Self-phase modulation (SPM)
- Cross-phase modulation (XPM)
- Four-wave mixing (FWM)
- Raman and Brillouin scattering
- Nonlinear pulse propagation

Chapter 5 – Signal Recovery and Noise

- Noise sources (shot, thermal)
- Signal-to-noise ratio and receiver sensitivity
- Bit-error rate, extinction ratio, timing jitter
- Forward error correction

• **Chapter 6 – Optical Amplifier Noise**

- Origins of amplifier noise (including EDFA)
- SNR analysis for lumped & distributed amplification
- Noise buildup and receiver effects

Chapter 7 – Dispersion Management

- Dispersion compensation techniques
- Dispersion-compensating fibers
- Fiber Bragg gratings
- Phase conjugation and advanced schemes

Chapter 8 – Nonlinearity Management

- Solitons and pseudo-linear systems
- Dispersion-managed solitons
- Intrachannel nonlinear effects and mitigation

• Chapter 9 – WDM Systems

- Basic wavelength-division multiplexing architecture
- Capacity, spectral efficiency, crosstalk mechanisms

Chapter 10 – Optical Networks

- Design issues for optical networks
- Networking architectures (as covered in book)

Appendices

- **Appendix A – System of Units**
- **Appendix B – Software Package (OptSim examples)**
- **Appendix C – Acronyms**
- **Index**
