

Contents :

Real Time Concepts

- Definition of real time
- Structural levels of processing
- Approximate processing

Processors

- Definition of processor
- General purpose microprocessor
- Digital signal processor (DSP)
- Specialized processors

Tradeoff Analysis

- Trade study
- Algorithm complexity
- Software-hardware tradeoffs

Space-Time Tradeoffs

- Space-time tradeoffs in software
- Space-time tradeoffs in hardware

Algorithm-Architecture Mapping: Principles

- Introduction to processes and procedures
- Tools and techniques for mapping

Algorithm-Architecture Mapping: Examples

- Two-dimensional convolution on one and multiple processors
- Linear prediction coding applied to telephone speech
- Two-dimensional filters on multiple processors
- Synthetic aperture radar image formation

Basic Hardware and Software Computing Elements

- Introduction and basic components

Components for Signal Analysis

- Fourier transform
- Wavelet transform
- Linear predictive coding

• Components for Signal Compression

- Speech coding
- Vector quantization
- Image compression

- **Components for Signal Comparison**

- Real-time pattern comparison
- Speech recognition
- Image recognition

- **System Design Methods and Tools**

- Design processes
- Systems engineering
- Requirements design
- Hardware design
- Software design
- System integration and testing
- Example system design
