Preface ix

How to Use this Learning Material Effectively x

Module-1: AN OVERVIEW OF POWER ELECTRONICS 1

Unit-1.1 **Basic Semiconductor Physics and Technology** 2

Overview; Unit Objectives; 1.1.1 Introduction 2; 1.1.2 *p*-type and *n*-type material 2; 1.1.3 The *p-n* junction 3; 1.1.4 A *p-n* junction under forward and reverse bias 3; 1.1.5 Power switching semiconductor transistor 5; 1.1.6 Thyristors 7; 1.1.7 Manufacturing techniques of power semiconductors 8; *Unit summary* 9; *Unit exercise* 9.

Unit-1.2 **Introduction to Power Electronics** 10

Overview; Unit Objectives; 1.2.1 Applications of power electronics 10; 1.2.2 Historical developments 11; 1.2.3 Different semiconductor devices 12; *Unit summary* 14; *Unit exercise* 15.

Unit-1.3 **Power Electronic Circuits** 16

Overview; Unit Objectives; 1.3.1 Diode rectifier 16; 1.3.2 A.C. to D.C. converters 17; 1.3.3 A.C. to A.C. converters 17; 1.3.4 D.C. to D.C. converters 18; 1.3.5 D.C. to A.C. converters 19; *Unit summary* 20; *Unit exercise* 20; *What you have learnt in this module* 21; *Points to remember* 21; *End-of-module test* 21; *References* 22; *Assistance* 22.

Module-2: SEMICONDUCTOR POWER DEVICES—CHARACTERISTICS AND RATINGS 24

Unit-2.1 **Power Diodes** 25

Overview; Unit Objectives; 2.1.1 Operation of a diode 25; 2.1.2 Ratings of power diode 26; 2.1.3 Diode characteristics 29; 2.1.4 Types of power diodes 30; 2.1.5 Use of snubber circuits 30; 2.1.6

Series parallel operations of diodes 31; 2.1.7 Junction structure and packaging of diodes 31; *Unit summary* 32; *Unit exercise* 32.

Unit-2.2 **Thyristors** 34

Overview; Unit Objectives; 2.2.1 Constructional details of a thyristor 34; 2.2.2 Operating states of a thyristor 35; 2.2.3 Characteristics of thyristors 36; 2.2.4 Ratings of thyristors 39; *Unit summary* 41; *Unit exercise* 42.

Unit-2.3 **DIAC, TRIAC, GTOs** 43

Overview; Unit Objectives; 2.3.1 DIAC 43; 2.3.2 TRIAC 44; 2.3.3 Gate-Turn-Off Thyristors (GTO Thyristors) 45; *Unit summary* 46; *Unit exercise* 46.

Unit-2.4 **Power Transistors – BJT, MOSFET, UJT** 47

Overview; Unit Objectives; 2.4.1 Power transistors 47; 2.4.2 Power MOSFET 49; 2.4.3 Unijunction Transistor (UJT) 49; *Unit summary* 51; *Unit exercise* 51; *What you have learnt in this module* 52; *Points to Remember* 52; *End-of-module test* 52; *References* 54; *Assistance* 54.

Module-3: COMMUTATION AND TRIGGER CIRCUITS 56

Unit-3.1 **Commutation in Thyristors** 57

Overview; Unit Objectives; 3.1.1 Introduction 57; 3.1.2 Line commutation 57; 3.1.3 Load commutation 58; 3.1.4 Forced commutation 59; 3.1.5 External pulse commutation 61; 3.1.6 Conditions of turning off of a thyristor 61; 3.1.7 Triacs and Commutation in Triacs 61; *Unit summary* 62; *Unit exercise* 63.

Unit-3.2 **Trigger Circuits for Thyristors** 64

Overview; Unit Objectives; 3.2.1 Introduction 64; 3.2.2 Gate triggering methods 65; 3.2.3 Pulse Trigger Circuit 66; 3.2.4 Digital firing scheme for thyristors 68; *Unit summary* 71; *Unit exercise* 71; *What you have learnt in this module* 71; *Points to remember* 72; *End-of-module test* 72; *References* 72; *Assistance* 73.

Module-4: INVERTERS, CHOPPERS AND CYCLOCONVERTERS 74

Unit-4.1 Inverters 75

Overview; Unit Objectives; 4.1.1 Working principle of inverters 75; 4.1.2 Thyristor inverters 76; 4.1.3 Half bridge inverter 77; 4.1.4 Full bridge inverter 77; 4.1.5 Three-phase bridge inverter 78; 4.1.6 Commutation in bridge inverters 79; 4.1.7 McMurray inverter circuit 81; 4.1.8 McMurray Bedford inverter circuit 82; *Unit summary 82; Unit exercise 83.*

Unit-4.2 Choppers and Cycloconverters 84

Overview; Unit Objectives; 4.2.1 Introduction 84; 4.2.2 Principle of step-down operation 86; 4.2.3 Principle of step-up operation 86; 4.2.4 Single thyristor chopper 87; 4.2.5 Auxiliary SCR commutated chopper circuit 87; 4.2.6 Morgan chopper circuit 88; 4.2.7 Examples of impulse commutated choppers and resonance pulse choppers 88; 4.2.8 Type A chopper 90; 4.2.9 Type B chopper 90; 4.2.10 Type C chopper 90; 4.2.11 Cycloconverters 91; 4.2.12 Single-phase bridge-type cycloconverter 91; 4.2.13 Cycloconverter with centre-tapped transformer and inter-group reactor 92; 4.2.14 Three-phase cycloconverters 94; *Unit summary 96; Unit exercise 96; What you have learnt is this module 96; Points to remember 97; End-of-module test 97; References 97; Assistance 97.*

Module-5: SOLID STATE CONTROL OF ELECTRICAL MOTORS 99

Unit-5.1 Speed Control of D.C. Motors 101

Overview; Unit Objectives; 5.1.1 Introduction 101; 5.1.2 Armature voltage control method 102; 5.1.3 Field control method of speed control 103; 5.1.4 Armature voltage control circuits 105; 5.1.5 Single-phase half wave converter 105; 5.1.6 Single-phase semiconverter 106; 5.1.7 Thyristor full converter 108; 5.1.8 Single-phase dual converter 109; 5.1.9 Three-phase bridge converters 110; 5.1.10 Classification of choppers 111; 5.1.11 Speed control using a d.c. chopper 114; 5.1.12 Regenerative brake control 114; 5.1.13 Rheostatic braking 115; 5.1.14 Different control circuits for d.c. motor 115; *Unit summary 116; Unit exercise 117.*

Unit-5.2 Speed Control of A.C. Motors (A.C. Drives) and Process Control Circuits 118

Overview; Unit Objectives; 5.2.1 Torque-speed characteristic of three-phase induction motors 118; 5.2.2 Speed control by stator voltage control 119; 5.2.3 Speed control by controlling the frequency of power supply 121; 5.2.4 Speed control of wound

rotor induction motors 124; 5.2.5 Speed control of single-phase motors 125; 5.2.6 Miscellaneous power electronic control circuits 127; *Unit summary 132; Unit exercise 133; What you have learnt in this module 133; Points to remember 133; End-of-module test 133; References 134; Assistance 134.*

Module-6: ELECTRONIC CONTROL OF WELDING, HEATING AND POWER SUPPLY SYSTEMS 135

Unit-6.1 Electronic Control of Welding System 136

Overview; Unit Objectives; 6.1.1 Welding 136; 6.1.2 Electric supply system 138; 6.1.3 Thyristor controlled rectifiers 138; 6.1.4 Inverter systems 140; *Unit summary 140; Unit exercise 141.*

Unit-6.2 Electronic Control of Heating and Power Supply Systems 142

Overview; Unit Objectives; 6.2.1 Control of electric heating 142; 6.2.2 Induction heating 142; 6.2.3 Dielectric heating 145; 6.2.4 Variable a.c. supply system (A.C. regulator) 146; 6.2.5 Power conditioners and uninterruptible power supplies (UPS) 148; 6.2.6 Constant voltage transformer (CVT) 151; *Unit summary 151; Unit exercise 152; What you have learnt in this module 152; Points to remember 152; End-of-module test 153; References 153; Assistance 153.*

Module-7: EXPERIMENTS IN POWER ELECTRONICS 154

- Introduction 155
- Experiment 1: Study of V-I Characteristics of a Silicon Rectifier (SCR) 156*
- Experiment 2: Study of V-I Characteristics of a Diac 158*
- Experiment 3: Study of V-I Characteristics of a Triac 161*
- Experiment 4: Study of V-I Characteristics of a Unijunction Transistor (UJT) 163*
- Experiment 5: Application of UJT as a Relaxation Oscillator 165*
- Experiment 6: Study of Half-wave Gate Controlled Rectifier Using One SCR 168*
- Experiment 7: Study of a Single-phase, Half-Controlled Full-wave Rectifier Using Two SCRs and Two Diodes 170*
- Experiment 8: Speed Control of a d.c. Shunt Motor Using SCR 172*
- Experiment 9: Study of a Three-phase Rectifier Using Power Diodes 174*
- Experiment 10: Study of a Three-phase Full-wave Half-controlled Rectifier 176*
