

Contents :

Introduction

Chapter 1 — Terms, Definitions, and Classification

- 1.1. Basic Concepts
- 1.2. The Structure of an Industrial Robot
- 1.3. Classification of Industrial Robots
- 1.4. Basic Characteristics of Industrial Robots

Chapter 2 — Manual Manipulators

- 2.1. Universal Manipulators
- 2.2. Special Manipulators

Chapter 3 — Auto-operators

- 3.1. Die Casting Automation
- 3.2. Automation of Sheet Forming
- 3.3. Automatic Servicing of Machine Tools
- 3.4. Automatic Replacement of Tools

Chapter 4 — Industrial Robot Designs

- 4.1. Technical Characteristics
- 4.2. Industrial Robots of the Modular Type
- 4.3. Typical Designs of Robot Groups
- 4.4. Adaptable Robots
- 4.5. Interactive Robots
- 4.6. End Effectors
- 4.7. Drives and Elements of Automation
- 4.8. Control Systems
- 4.9. Information Systems

Chapter 5 — Robot Applications

- 5.1. Flexible Robotic Production
- 5.2. Applications in Foundry Practice
- 5.3. Press Work and Forging Applications
- 5.4. Heat Treatment Applications
- 5.5. Applications to Machine Tools
- 5.6. Applications to Assembly Work
- 5.7. Welding Applications
- 5.8. Robots in Painting
- 5.9. Robots in Electroplating
- 5.10. Applications in Material Handling and Warehousing
- 5.11. Work Cycle Time Analysis for Robotic Systems
- 5.12. Robot Economics

Chapter 6 — Robot Work Cell Operation. Basic Concepts

6.1. Safety Systems

6.2. Testing Methods and Acceptance Rules

6.3. Preparatory Stages in Evolving the Project

Chapter 7 — Robot Design Recommendations

7.1. Initial Design Data

7.2. Calculation of Basic Design and Performance Characteristics

7.3. Robot Drive Design

7.4. Some Notes on Strength Analysis
