

# CONTENTS

	<b>Page</b>
<b>Chapter 1 INTRODUCTION</b> .....	<b>1</b>
Systems and control systems. Examples of control systems. Classification of control systems. Feedback. Characteristics of feedback. The control systems engineering problem. Representation of the problem: the model. Control systems science.	
<hr/>	
<b>Chapter 2 CONTROL SYSTEMS TERMINOLOGY</b> .....	<b>12</b>
Block diagram fundamentals. Block diagram of a feedback control system. Terminology of the closed-loop block diagram. Supplementary terminology. Servomechanisms. Regulators.	
<hr/>	
<b>Chapter 3 LINEAR SYSTEMS AND DIFFERENTIAL EQUATIONS</b> .....	<b>28</b>
Equations of physical systems. Differential equations. Partial and ordinary differential equations. Time-variable and time-invariant differential equations. Linear and nonlinear differential equations. Linearity and superposition. Causality and physically realizable systems. Linearized and piecewise-linear systems. The differential operator $D$ and the characteristic equation. Linear independence and fundamental sets. Solution of linear constant coefficient ordinary differential equations. The free, forced and total responses. The steady-state and transient responses. Singularity functions. Second order systems.	
<hr/>	
<b>Chapter 4 THE LAPLACE TRANSFORM</b> .....	<b>56</b>
The Laplace transform and its inverse. Some properties of the Laplace transform and its inverse. Short table of Laplace transforms. Application of Laplace transforms to the solution of linear constant coefficient ordinary differential equations. Partial fraction expansions. Inverse transforms using partial fraction expansions. Determining roots of polynomials. The complex plane and pole-zero maps. Graphical evaluation of residues. Second order systems.	
<hr/>	
<b>Chapter 5 STABILITY</b> .....	<b>86</b>
Stability definitions. Characteristic root locations. Routh stability criterion. Hurwitz stability criterion. Continued fraction stability criterion.	
<hr/>	
<b>Chapter 6 TRANSFER FUNCTIONS</b> .....	<b>97</b>
Definitions. Properties. Transfer functions of control system compensators. System time response. System frequency response.	

## CONTENTS

	Page
<p><b>Chapter 7</b>    <b>BLOCK DIAGRAM ALGEBRA AND TRANSFER FUNCTIONS OF SYSTEMS</b> .....</p> <p>Review of fundamentals. Blocks in cascade. Canonical form of a feedback control system. Block diagram transformations. Unity feedback systems. Multiple inputs. Block diagram reduction.</p>	112
<hr/>	
<p><b>Chapter 8</b>    <b>SIGNAL FLOW GRAPHS</b> .....</p> <p>Fundamentals. Signal flow graph algebra. Definitions. Construction of signal flow graphs. The general input-output gain formula. The transfer function of cascaded components. Block diagram reduction using signal flow graphs and general input-output gain formula.</p>	136
<hr/>	
<p><b>Chapter 9</b>    <b>SYSTEM CLASSIFICATION, ERROR CONSTANTS, AND SENSITIVITY</b> .....</p> <p>Classification of feedback systems by type. Position error constants. Velocity error constants. Acceleration error constants. Error constants for general systems. Sensitivity.</p>	162
<hr/>	
<p><b>Chapter 10</b>    <b>THE ANALYSIS AND DESIGN OF FEEDBACK CONTROL SYSTEMS: OBJECTIVES AND METHODS</b> .....</p> <p>Objectives of analysis. Methods of analysis. Design objectives. Design methods.</p>	179
<hr/>	
<p><b>Chapter 11</b>    <b>NYQUIST ANALYSIS</b> .....</p> <p>Complex functions of a complex variable. Definitions. Properties of the mapping <math>P(s)</math>. Polar plots and their properties. The Nyquist path. The Nyquist stability plot. Nyquist stability plots of practical feedback control systems. The Nyquist stability criterion. Relative stability. <math>M</math> and <math>N</math> circles.</p>	187
<hr/>	
<p><b>Chapter 12</b>    <b>NYQUIST DESIGN</b> .....</p> <p>Design philosophy. Gain-factor compensation. Gain-factor compensation using <math>M</math>-circles. Lead compensation. Lag compensation. Lag-lead compensation. Other compensation schemes.</p>	224
<hr/>	
<p><b>Chapter 13</b>    <b>ROOT-LOCUS ANALYSIS</b> .....</p> <p>Variation of closed-loop system poles: the root-locus. Angle and magnitude criteria. Number of loci. Real axis loci. Asymptotes. Breakaway points. Departure and arrival angles. The Spirule. Construction of the root-locus. The closed-loop transfer function and the time-domain response. Gain and phase margins from the root-locus. Damping ratio from the root-locus.</p>	237
<hr/>	
<p><b>Chapter 14</b>    <b>ROOT-LOCUS DESIGN</b> .....</p> <p>The design problem. Cancellation compensation. Phase compensation: lead and lag networks. Magnitude compensation. Dominant pole-zero approximations. Point design. Feedback compensation.</p>	260

## CONTENTS

	Page
Chapter <b>15</b> <b>BODE ANALYSIS</b> .....	275
Logarithmic scales and Bode plots. The Bode form and the Bode gain. Bode plots of simple frequency response functions and their asymptotic approximations. Construction of Bode plots. Relative stability. Closed-loop frequency response.	
<hr/>	
Chapter <b>16</b> <b>BODE DESIGN</b> .....	295
Design philosophy. Gain-factor compensation. Lead compensation. Lag compensation. Lag-lead compensation.	
<hr/>	
Chapter <b>17</b> <b>NICHOLS CHART ANALYSIS</b> .....	314
db magnitude-phase angle plots. Construction of db magnitude-phase angle plots. Relative stability. The Nichols chart. Closed-loop frequency response functions.	
<hr/>	
Chapter <b>18</b> <b>NICHOLS CHART DESIGN</b> .....	333
Design philosophy. Gain-factor compensation. Gain-factor compensation using constant amplitude curves. Lead compensation. Lag compensation. Lag-lead compensation.	
<hr/>	
Chapter <b>19</b> <b>ADVANCED TOPICS</b> .....	350
Nonlinear control systems. Discrete time systems. Systems with random inputs. Optimal control systems. Adaptive control systems.	
<hr/>	
<b>APPENDIX</b> .....	361
Table of special Laplace transforms.	
<hr/>	
<b>REFERENCES</b> .....	363
<hr/>	
<b>BIBLIOGRAPHY</b> .....	365
<hr/>	
<b>INDEX</b> .....	367
