

Table of Contents :

1. Introduction to Stochastic Service Systems

- Basic concepts of service systems
- Random phenomena in service processes
- Applications of stochastic models
- Role of probability theory in service analysis

2. Fundamentals of Probability Theory

- Random variables and probability distributions
- Expectation and variance
- Discrete and continuous distributions
- Limit theorems and stochastic behavior

3. Stochastic Processes

- Definition and classification of stochastic processes
- Markov processes
- Stationary and non-stationary processes
- Continuous-time stochastic models

4. Queueing Theory Fundamentals

- Structure of waiting-line systems
- Arrival processes
- Service-time distributions
- Queue disciplines and service policies

5. Poisson Processes and Birth-and-Death Models

- Poisson arrival processes
- Exponential service distributions
- Birth-and-death processes
- Applications to service systems

6. Markovian Queueing Systems

- Single-server queue models
- Multi-server queue models
- State-transition analysis
- Steady-state probabilities

7. Analysis of Service System Performance

- Mean waiting time
- Queue length evaluation
- Server utilization

- System capacity and efficiency

8. General Queueing Models

- Systems with general arrival distributions
- Systems with general service-time distributions
- Approximation methods
- Complex queue structures

9. Networks of Service Systems

- Multiple interconnected queues
- Communication networks
- Flow of customers or information
- Network performance analysis

10. Reliability and Availability of Service Systems

- Failure and repair processes
- Reliability models
- Availability analysis
- Maintenance service systems

11. Optimization of Service Systems

- Capacity planning
- Resource allocation
- Minimizing waiting costs
- Improving system performance

12. Applications of Stochastic Service Theory

- Telecommunication systems
- Computing and information systems
- Industrial service systems
- Transportation and operational systems

13. Mathematical Tables and Reference Data

- Probability distributions
- Stochastic formulas
- Queueing model equations
- Analytical results and performance indicators

Main Topics

- Stochastic processes
- Queueing systems
- Probability models
