

Contents

1. Introduction to Electrical Engineering Materials

- Classification of materials
- Role in electrical engineering
- Physical, electrical, thermal, and mechanical properties

2. Conducting Materials

- Electrical conductivity
- Copper
- Aluminum
- Silver and special metals
- Resistive alloys

3. Semiconductor Materials

- Crystal structure
- Intrinsic semiconductors
- Extrinsic semiconductors
- Doping
- PN junction
- Electronic applications

4. Insulating Materials (Dielectrics)

- Dielectric polarization
- Permittivity
- Dielectric strength
- Dielectric losses
- Insulation aging

5. Magnetic Materials

- Diamagnetism
- Paramagnetism
- Ferromagnetism
- Soft magnetic materials
- Hard magnetic materials
- Ferrites
- Hysteresis
- Core losses

6. Superconducting Materials

- Superconductivity
- Critical temperature
- Meissner effect

- Engineering applications

7. Resistive Materials

- Electrical resistance
- Heating elements
- Nichrome
- Constantan
- Precision resistors

8. Insulating Materials for Electrical Equipment

- Transformer oil
- Paper insulation
- PVC
- Polyethylene (PE)
- Epoxy resins
- Rubber insulation

9. Aging and Reliability of Electrical Materials

- Thermal aging
- Moisture effects
- Electrical stress
- Mechanical degradation
- Lifetime assessment

10. Material Selection in Electrical Engineering

- Selection criteria
- Performance
- Cost
- Reliability
- Environmental considerations
