

# Table of Contents

## 1. Random Fluctuations

- Thermal Noise (Johnson–Nyquist Noise)
- Shot Noise
- Flicker Noise ( $1/f$  Noise)
- Generation–Recombination Noise
- Thermal Radiation Fluctuations

## 2. Signal-to-Noise Relations

- Signal-to-Noise Ratio (SNR)
- Detection Sensitivity
- Fundamental Measurement Limits
- Noise Equivalent Power (NEP)

## 3. Thermal Detectors

- Operating Principles
- Frequency Response
- Noise Characteristics
- Performance Parameters

## 4. Vacuum Photodetectors

- Photomultiplier Tubes (PMTs)
- Photon-to-Electron Conversion
- Gain Mechanisms
- Noise Sources

## 5. Semiconductor Photodetectors

- Photodiodes
- Avalanche Photodiodes (APDs)
- Quantum Efficiency
- Dark Current and Noise

## 6. Correlation Analysis

- Autocorrelation
- Cross-Correlation
- Signal Extraction from Noise
- Spectral Analysis

## 7. Signal Processing

- Operational Amplifiers
- Signal Averaging
- Filtering Techniques

- Waveform Analysis
- SNR Improvement

## **8. Heterodyne Detection**

- Frequency Mixing
- Local Oscillator
- Coherent Detection
- Noise Reduction Techniques

## **9. Fast Detection of Weak Noisy Signals**

- Optimal Detection Methods
- Laser Radar (LIDAR)
- Optical Communication Systems
